Regulatory Impact on Vape Shops and Young Adults' Use of ENDS
This study examines the impact of regulation and place characteristics on vape shop survival, marketing, and point-of-sale practices and the impact of these factors on young adult ENDS use over time in 6 metro areas; these data are critical in informing future ENDS-related regulation.

CSUSM/UCSD Smoke and Vape Free Scholars Program for Reducing Tobacco Disease in Diverse Communities
Combating tobacco industry tactics requires mobilizing individuals with the dedication, training, and enthusiasm to help correct tobacco related disparities in their communities. CSU San Marcos (CSUSM) has partnered with UC San Diego (UCSD) to create the premier CSUSM-UCSD Smoke and Vape Free Scholars Initiative Program (SVFSIP) for Reducing Tobacco Disease in Diverse Communities. The CSUSM-UCSD SVFSIP will fill a critical gap as the first student training program devoted to tobacco control/advocacy and will leverage existing student training program infrastructure at CSUSM including long-term evaluation resources.

Modifying Tobacco and Cannabis Waste Perceptions and Behaviors: A Randomized Controlled Trial
This study will fill a significant void in the developing literature on knowledge and perceived harm of e-cigarette and cannabis product waste, an integral component of the tobacco endgame. This will be the first randomized controlled trial to modify perceptions and behavior related to tobacco, e-cigarette, and cannabis waste (TECW). Interventions to increase non-criminalized, policy enforcement behavior will advance the endgame in an equitable framework.

Behavioral Economic Demand for Cannabis and Tobacco among Young Adult Dual Users
This project will produce a host of novel data to understand behavioral economic demand for cannabis and tobacco among young adult dual users, which is critical to progress in preventing and treating dual use among a high-risk group. This study will produce the first prospective investigation of behavioral economic demand for cannabis and tobacco (cigarettes and/or e-cigarettes) over one year (Aim 1), the first evaluation of demand as an antecedent of dual

tobacco and cannabis product use and characterization of the relative contributions of demand indices for each substance to behavioral health sequelae of use (Aim 2), and the first model testing whether demand for cannabis and tobacco mediates a link between social cognitive theory-based factors and cannabis and tobacco use (Aim 3).

4 th Generation E-cigarettes in African American Smokers: Reducing Harm and Quitting Combustible Cigarettes in Dual Users

This randomized controlled trial will test whether 1) short-term changes in e-cigarette use patterns are maintained long-term, 2) short-term changes in e-cigarette use patterns are associated with long-term reductions in exposure to harmful and potentially harmful toxicants, or their risk of developing health problems, and 3) varenicline can facilitate cigarette abstinence among dual users, thereby increasing the proportion of smokers who experience the harm reduction potential of exclusive EC use.

Impact of Switching to E-Cigarettes Among People with ADHD Who Use Combusted Cigarettes Electronic Nicotine Delivery Systems (ENDS) and Alternative Nicotine and Tobacco Delivery Systems: Population, Clinical and Applied Prevention Mechanisms of Health Effects

The goal of this research is to evaluate the impact of switching to e-cigarettes (EC) among smokers with ADHD as a harm-reduction strategy. The effects of switching to EC among individuals with a psychiatric diagnosis generally, and ADHD specifically, are not known. Data from this study can inform whether switching to EC is acceptable in this population, results in

decreased toxicant and carcinogen exposure, and whether switching results in the same outcomes as for smokers without ADHD.

Tracking Tobacco Waste to Increase College Policy Engagement and Compliance

The goal of this research is to address the critical problem of engaging campus communities with their smoke and tobacco free (STF) policy and creating a culture which supports and enforces the policy. The long-term objective of this research is to strengthen compliance with college STF policies and reduce environmental tobacco waste. The study aims to develop and pilot tracking tools to be tested in a subsequent randomized controlled trial with a full sample of CA colleges and universities with 100% STF policies.
